Art Unit: 1623

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over the International Patent WO 00/26244 in view of Agouridas et al (U.S. Patent No. 5,747,467).

The International Patent discloses a closely analogous erythromycin antibiotic (page 3) and a process for preparing the same. The only difference between the claimed compounds and the reference' compounds is at the 2-position i.e. the claimed compounds contain a halogen atom at the 2-position, while the reference's compounds do not. However, since a halogen atom at the 2-position of an erythromycin antibiotic was well known in the art at the time the instant invention was made, a person having ordinary skill in the art at the time the instant invention was made would have been

Art Unit: 1623

motivated to modify the compounds disclosed by the International Patent at the 2-position in accordance with the teaching by Agouridas et al because such a person would have expected the resulting compounds to be useful as antibiotics.

Applicant's response file April 21, 2003 has been considered but has not been found persuasive insofar as the above rejection relates to the claims.
